

TAKSH PRAJAPATI

Software Developer | Python • FastAPI & Flask • JavaScript • SQL • Cloud Deployment

Regina, SK • +1 306-581-0437 • 10takshprajapati01@gmail.com • github.com/10Taksh

PROFESSIONAL SUMMARY

Computer Science diploma graduate who builds and deploys full-stack web applications with Python (FastAPI, Flask), JavaScript and SQL. Shipped two live projects on Oracle Cloud: an AI-powered invoice parser using the Google Gemini API and a staff-scheduling app backed by 59 automated tests. Brings leadership and problem-solving from a retail supervisor role earned through promotion in under a year.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, SQL, HTML5, CSS3

Frameworks & Libraries: FastAPI, Flask, SQLAlchemy (ORM), pytest (Unit Testing), Responsive Web Design

Databases: SQLite, PostgreSQL, Relational Data Modeling

AI & APIs: Google Gemini API, LLM Integration, Structured Data Extraction (JSON), RESTful API Design

Cloud & DevOps: Oracle Cloud (OCI), Linux (Ubuntu), systemd, Caddy, Gunicorn, Render, Git, GitHub

Professional: Team Leadership, Training & Onboarding, Customer Service, Conflict Resolution, Microsoft Office

PROJECTS

Stockboard – AI Invoice Inventory Tracker

[Live Demo](#) | [GitHub](#)

Tech Stack: Python, FastAPI, Google Gemini API, SQLite, JavaScript, Caddy, Linux (Ubuntu), Oracle Cloud

- Built an AI tool to eliminate manual data entry for retail stock rotation, using the Google Gemini API to extract product names and expiry dates from supplier invoice PDFs as structured JSON.
- Designed a SQLite data model that updates a product's expiry date on each new delivery, keeping all expiry-window logic in SQL so date math is deterministic and never relies on the LLM.
- Developed a FastAPI backend and JavaScript dashboard with a folder watcher that auto-ingests new PDFs, plus search, filters and alerts for expired and soon-to-expire stock.
- Automated Oracle Cloud deployment with a one-command setup script (systemd service, Caddy reverse proxy, firewall, nightly backups) and a public demo mode that never exposes API keys.

Visual Schedule Builder – Retail Staff Scheduling App

[Live Demo](#) | [GitHub](#)

Tech Stack: Python, Flask, SQLAlchemy, PostgreSQL/SQLite, JavaScript, HTML/CSS, pytest, Oracle Cloud

- Built a full-stack web app for retail stores to manage employees, availability, positions and store hours, with a drag-and-drop timeline to place, move and resize shifts.
- Engineered server-side validation that checks every shift against store hours, availability and overlaps before saving, returning clear conflict errors via a REST API.
- Architected framework-independent service modules covered by 59 pytest tests; shipped duplicate/clear-day actions, undo, configurable unpaid-break rules and hourly coverage tracking.
- Delivered a master schedule with paid-hour totals, CSV export and mobile-responsive layout; deployed on Oracle Cloud (Gunicorn, Caddy, systemd) with PostgreSQL and Render support.

PROFESSIONAL EXPERIENCE

Shoppers Drug Mart | Regina, SK

Promoted from Cashier/Merchandiser to Supervisor within 11 months for consistent performance and leadership.

Supervisor

April 2026 – Present

- Lead shift teams by delegating tasks and train new hires on store procedures, POS and service standards.
- Oversee POS transactions and cash management, including till counts and deposits, per cash-handling policy.
- De-escalate customer concerns promptly and professionally; execute store opening and closing procedures.

Cashier / Merchandiser

May 2025 – April 2026

- Processed cash, debit and credit POS transactions accurately and assisted customers with inquiries.
- Restocked and merchandised products to maintain organized, well-stocked displays in a fast-paced store.

EDUCATION

Diploma in Computer Science | University of Regina, Regina, SK

Completed August 2026
